

APPLIED AGRICULTURAL RESEARCH FOR FARMERS

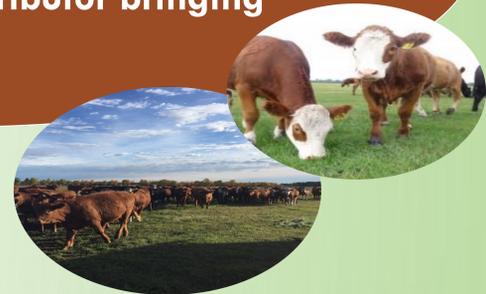

DID YOU KNOW....

Depending on year and producers interest, GRO conducts variety trials on wheat, barley, oat, flax, triticale, and canola.

The heifer pasture of 160 acres is used for demonstrating grazing cell design pattern, product demo, cover crops and sod seeding trails with members contributor bringing heifers every year

Gateway Research Organization provides cost-effective applied agricultural research and unbiased farm production information

Our crop and demonstrations tours are for producers to make informed decisions

Regional Silage trials of barley, triticale, oats.

Annual and perennial forages trial to assess persistence and a cocktail mixture in our region.

Conduct research trial that fits priorities of producers with support from crop commissions and industry partners.

We evaluate and conduct tests on new products and management practices so producers have more knowledge about what works locally

Extension tour provides economically and scientifically sound information to facilitate greater returns to farms

Monitoring and survey of cereals pests, diseases and weeds.
